#### **DETAILED ACTION**

1. This communication is in response to Applicants' Amendment and Response to Office

Action mailed on 29 January 2004. Claims 9, 15, and 18 were amended; claims 1-20 are pending.

# Claim Rejections - 35 U.S.C. § 112, First Paragraph

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

- 2.1 Claims 1-15 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.
- 2.2 Regarding independent claims 1 and 10, claim 1 includes the limitation "determining sets of mutually exclusive operations from the specified processor operations based on the desired instruction level parallelism" and claim 10 includes the limitation "from an input specification defining a set of specified processor operations and instruction level parallelism among the specified operations, determining sets of mutually exclusive operations."

Art Unit: 2123

The Specification does not appear to teach how one reasonably skilled in the art would determine the sets of mutually exclusive operations; the Specification instead appears to describe an "input specification 34" in which the sets of mutually exclusive operations have already been determined.

According to the Specification at page 17 lines 23-30 (in-part):

... The datapath synthesizer 20 (Fig.1) processes an input specification like the one graphically depicted in Fig. 2 (e.g., Item 34) to create a physical datapath representation 38... As shown in this example, the input specification 34 provides the desired operation groups 35, and specifies the instruction level parallelism among these groups as "exclusion groups"...

[Emphasis added.]

As shown in Fig. 2, the operation groups 35 and exclusion group 36 are encapsulated within input specification 34.

Although pages 13-17 of the Specification may describe how input specification 34 is generated, the Specification does not appear to contain how the exclusion groups are generated as part of the generation of input specification 34.

Taken as a whole, only with undue experimentation could one reasonably skilled in the art make and/or use the invention, because of the omissions in the subject matter described in the Specification.

2.3 Claims 2-9 and 11-15 are each dependent on one of independent claims 1 and 8 and are rejected using the same analysis.

Art Unit: 2123

## Allowable Subject Matter

3. Claims 16-20 are allowed.

# Applicants' Arguments

- 4. Regarding the prior rejection under Section 112, first paragraph, Applicants argue the following at page 21 paragraph 1 of the <u>Amendment</u>:
  - ... At page 17, lines 25-30 of the specification, the Applicants disclose that input specifications identify groups of operations and the instruction level parallelism that exist between them. The groups of operations are termed "exclusion groups". In other words, mutually exclusive operations are determined from an identification of the instruction level parallelism that exists between the groups of operations. The Applicants respectfully submit that the above referenced discussion clearly describes how sets of mutually exclusive operations are determined.

#### Examiner's Reply

5. In response to Applicants' argument, the Examiner respectfully disagrees for the following reasons:

Applicants' argument quoted above does not appear to indicate <u>how</u> the claimed invention <u>automatically</u> performs the claim limitation of "determining sets of mutually exclusive operations from the specified processor operations based on the desired instruction level

Art Unit: 2123

parallelism." The automation of this step is implied by the preambles of independent claims 1 and 10; claim 1 states "A method for automatic design of a processor datapath . . ." and claim 10 states "A method for automatic synthesis of functional units in a programmable processor datapath . . ."

As understood by the Examiner, the "abstract ISA specification" described at page 17 of the Specification corresponds to "input specification 34" identified at page 17 line 23.

According to Applicants' argument above, the input specification contains the "exclusion group" information. However, this argument does not appear to indicate how this information is generated. According to the Specification at page 17 lines 1-5, the input specification is generated from the "ArchSpec 10" abstract textual description.

The Specification at pages 13-17 describes how the ArchSpec 10 description is manipulated to form "Exclusion Group[s]" but does not disclose an algorithm describing the formation of these groups, in order to demonstrate the <u>automation</u> of forming an input specification containing "sets of mutually exclusive operations" as required in claims 1 and 10.

For these reasons, Applicants' argument is not sufficient to remove the rejection under Section 112, first paragraph. Applicants may be able to traverse this rejection by indicating where the algorithm for the automatic generation of exclusion groups (corresponding to "mutually exclusive operations" in claims 1 and 10) is contained in one of the applications incorporated by reference. See MPEP § 608.01(p).

Art Unit: 2123

### Conclusion

6. The prior art made of record and not relied upon is considered pertinent to Applicants' disclosure.

7. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 C.F.R. 1.136(a).

A SHORTENED STATUTORY PERIOD FOR RESPONSE TO THIS FINAL ACTION IS SET TO EXPIRE THREE MONTHS FROM THE DATE OF THIS ACTION. IN THE EVENT A FIRST RESPONSE IS FILED WITHIN TWO MONTHS OF THE MAILING DATE OF THIS FINAL ACTION AND THE ADVISORY ACTION IS NOT MAILED UNTIL AFTER THE END OF THE THREE-MONTH SHORTENED STATUTORY PERIOD, THEN THE SHORTENED STATUTORY PERIOD WILL EXPIRE ON THE DATE THE ADVISORY ACTION IS MAILED, AND ANY EXTENSION FEE PURSUANT TO 37 C.F.R. 1.136(a) WILL BE CALCULATED FROM THE MAILING DATE OF THE ADVISORY ACTION. IN NO EVENT WILL THE STATUTORY PERIOD FOR RESPONSE EXPIRE LATER THAN SIX MONTHS FROM THE DATE OF THIS FINAL ACTION.

9. Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Samuel Broda, whose telephone number is (703) 305-1026. The Examiner can normally be reached on Mondays through Fridays from 8:00 AM – 4:30 PM.

If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's supervisor, Kevin Teska, can be reached at (703) 305-9704. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the group receptionist, whose telephone number is (703) 305-3900.
